

Manage Software House C•Cure 9000 from within the Senstar Symphony™ Common Operating Platform

Senstar Symphony includes built-in support for Software House C•Cure 9000. The integration allows operators to receive events from the C•Cure 9000 system and trigger alarms based on these events.

Tasks can be easily automated, whether it's locking down doors and specific areas, or granting remote access.

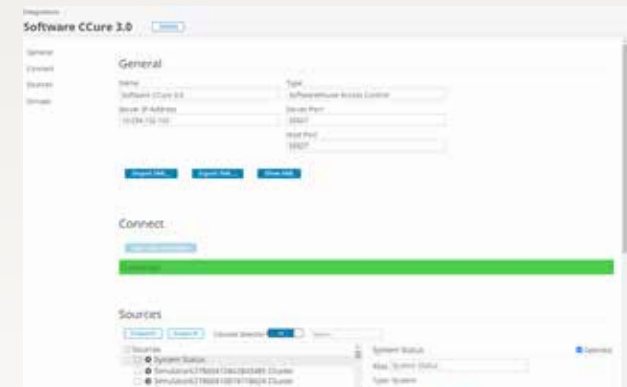

The solution features a user-friendly interface that seamlessly integrates with a single UI, eliminating unnecessary complexity and saving valuable time and resources for operators, integrators, and solution owners alike. Elevate your security infrastructure effortlessly with Senstar's innovative integration.

In order to use this feature, a license is needed from Senstar to allow a single connection to your C•Cure 9000 instance. A connection license on your C•Cure 9000 system is also required to connect with the Senstar integration.

SKU: S8SW3021-XXY - Symphony V8 Software House CCure Integration

Features and Benefits

- Simple integration allows administrators to add SWH C•Cure9000 for direct communication
- Receive events and personal data
- Send commands to hardware devices
